WWW: Bold Profile

Embedded Software Engineer with expertise in ECU software, release management, and Agile practices. Proficient in Azure DevOps, Git, C/C++, Python, and CAPL. Experienced with CAN/LIN protocols, AUTOSAR, ISO 26262, and delivering solutions for Renault/Nissan and Stellantis.

Professional Experience

January 2022 - Current

Embedded Software Engineer

Lear Corporation, Morocco

- Experience in **embedded systems development**, with a strong emphasis on **safety-critical software** and compliance with international standards such as **ISO 26262** and **AUTOSAR**. this expertise lies in designing, implementing, and optimizing **reliable systems** for complex automotive projects.
- In my role on projects like the **Under Hood Switching Module (USM)** and **Distribution Box ECU (RDB)**, I applied **Agile methodologies** to manage sprints, oversee backlogs, and coordinate cross-functional teams. I automated key processes, including **build chains** and **CI/CD pipelines**, which significantly reduced development cycles and improved traceability using tools like **Azure DevOps**, **Git**, and **SVN**.
- My technical expertise includes **diagnostics** and **validation** through **CAN/LIN protocols**, **CAPL scripting**, and tools like **CANoe** and **Trace32**. I have extensive experience in **debugging** and **root cause analysis**, ensuring compliance with stringent **safety** and **performance standards** while delivering high-quality software.
- I am skilled in **mentoring junior engineers**, providing guidance on debugging techniques, **version control**, and **industry best practices**. I have also contributed to **process optimization** initiatives, enhancing system performance and ensuring alignment with **safety** and **compliance requirements**.
- My background in **safety-critical systems**, compliance with **industry standards**, and **process automation** demonstrates my ability to deliver **secure** and **reliable solutions**. With a focus on **quality** and **continuous improvement**, I am ready to take on challenging roles requiring **technical expertise** and **leadership**.

January 2021 - January 2022

Embedded Software Engineer Intern

Lear Corporation, Morocco

- Developed software for rear light systems per ISO26262, including documentation and tests
- Created test plans, identified critical defects early, cutting late-stage costs by 15%
- Engaged in safety analysis and cross-department meetings for industry standard compliance

Education

Embedded Systems And Digital Services
INPT, Morocco

MPSI/MP Preparatory Classes
CPGE Reda Slaoui, Agadir, Morocco

Skills

- ISO 26262 & ISO 21434:** Functional Safety, Cybersecurity, Risk Management
 - CAN/LIN Protocols:** Diagnostics, Network Design, Flashing
- Programming Languages:** C/C++, Python, C#
 - Azure DevOps:** CI/CD, Git, Release Management

Certifications

advanced Trace32.
ISTQB verity software
